

CHEMFARM INTERNATIONAL

Product Category - Dyes

ACID DYES

Vibrant colours. Excellent levelness.
Superior performance for protein fibres.

Acid dyes are water-soluble dyes used primarily for dyeing protein and polyamide fibres. They deliver bright, uniform shades with good exhaustion, levelness and wash fastness.

IDEAL FOR

- Wool
- Silk
- Nylon (Polyamide)
- Leather

KEY HIGHLIGHTS

- Bright & vivid shades
- Excellent levelness
- Good colour strength
- Good exhaustion
- Wide range of shades
- Easy solubility

Acid Dyes

Vibrant colour solutions designed for excellent levelness, strong colour performance and reliable dyeing across protein and polyamide fibres.

Acid dyes are water-soluble dyes widely used for colouring **wool, silk, nylon and other suitable fibres**. They offer a broad spectrum of bright and vivid shades and are valued for their ability to provide uniform dyeing, good colour penetration and consistent shade reproduction.

Chemfarm International offers acid dye solutions for diverse textile and specialty applications, with a focus on **colour consistency, solubility, process reliability and dependable performance**. Our range is intended to support manufacturers seeking repeatable results across different dyeing and processing requirements.

Key Applications

Wool • Silk • Nylon • Leather • Blended Fabrics • Shawls & Scarves • Apparel Dyeing

Key Benefits

- Bright & Vivid Shades
- Excellent Levelness
- Good Colour Strength
- Good Exhaustion

- Easy Solubility
- Consistent Shade Reproduction
- Broad Colour Range
- Suitable for Multiple Dyeing Processes

Our Supply Commitment

Consistent Quality

Focused on dependable batch-to-batch performance and colour consistency.

Technical Expertise

Application-focused support to help customers select suitable dye solutions for their processing requirements.

Reliable Supply

Strong distribution capabilities supporting timely supply to customers across India.

Global Reach

Serving and developing relationships with customers across international markets.
