

CHEMFARM INTERNATIONAL

Product Category - Dyes

Direct Dyes

Versatile water-soluble colour solutions designed for straightforward application, strong colour development and consistent dyeing across cellulosic fibres and paper applications.

Direct dyes are **water-soluble dyes with a natural affinity for cellulosic materials**, allowing them to be applied directly to substrates such as cotton, viscose and paper. Their relatively simple application process, broad shade availability and good colour yield make them widely used across textile, paper and other industrial colouring applications.

Chemfarm International offers direct dye solutions focused on **shade consistency, good solubility, colour strength and reliable processing performance**, supporting manufacturers across a variety of application requirements.

Key Applications

Cotton • Viscose • Rayon • Paper & Pulp • Paper Products • Textile Dyeing • Textile Printing • Specialty Industrial Applications

Key Benefits

- Broad & Versatile Shade Range
- Good Colour Strength
- Easy Application
- Good Water Solubility
- Consistent Shade Reproduction
- Good Affinity for Cellulosic Materials
- Suitable for Textile & Paper Applications
- Cost-Effective Colouring Solutions

Key Direct Dye Solutions

Direct Red • Direct Blue • Direct Yellow • Direct Orange • Direct Green • Direct Black • Direct Violet • Application-Specific Shades

Our Supply Commitment

Consistent Quality

Focused on dependable colour strength, shade consistency and repeatable application performance.

Application Expertise

Supporting dye selection for textile, paper, pulp and other cellulosic applications.

Reliable Supply

A growing Pan-India supply network supporting timely and dependable product availability.

Global Reach

Serving and developing relationships with customers across international markets.
