

CHEMFARM INTERNATIONAL

Advanced Paper Chemical Categories

02. Wet-End Chemicals

Essential wet-end additives developed to improve paper formation, retention, drainage and sheet strength during the papermaking process.

Wet-end chemicals are specialty additives introduced during paper manufacturing to optimize fibre interaction, improve machine performance and enhance finished paper quality.

Key Applications

Writing & Printing Paper • Tissue Paper • Packaging Paper • Kraft Paper • Duplex Board • Specialty Paper • Molded Fibre Products • Paper Recycling

Key Products & Types

Retention Aids • Drainage Aids • Strength Additives • Fixing Agents • Wet-End Starch • Cationic Polymers • Specialty Wet-End Chemicals

Key Benefits

- Improved Fibre Retention
- Better Drainage
- Enhanced Sheet Formation
- Increased Paper Strength
- Improved Machine Productivity
- Consistent Paper Quality
- Lower Production Losses
- Optimized Wet-End Performance

03. Coating Additives

Advanced coating solutions designed to improve surface smoothness, printability, brightness and finished paper appearance.

Coating additives enhance the surface properties of paper and paperboard, providing better coating performance, printability and visual quality.

Key Applications

Coated Paper • Art Paper • Packaging Board • Duplex Board • Printing Paper • Label Paper • Decorative Paper • Specialty Paper

Key Products & Types

Coating Binders • Surface Sizing Chemicals • Dispersing Agents • Optical Brighteners • Lubricants • Rheology Modifiers • Coating Performance Additives

Key Benefits

- Improved Surface Smoothness
- Better Printability
- Enhanced Brightness
- Improved Gloss
- Uniform Coating Distribution
- Better Ink Absorption
- Improved Surface Strength

- Premium Paper Finish

04. Process Efficiency Aids

Performance chemicals developed to optimize papermaking operations, improve machine efficiency and support stable production.

Process efficiency aids improve mill performance by reducing downtime, improving stability and enhancing production efficiency.

Key Applications

Paper Mills • Tissue Manufacturing • Packaging Paper • Kraft Paper • Recycled Paper • Specialty Paper • Molded Fibre Products • Industrial Papermaking

Key Products & Types

Machine Cleaning Chemicals • Pitch Control Agents • Deposit Control Chemicals • Defoamers • Process Stabilizers • Scale Control Chemicals • Performance Additives

Key Benefits

- Improved Machine Efficiency
- Reduced Downtime
- Better Process Stability
- Effective Deposit Control
- Reduced Foam Formation
- Improved Production Consistency
- Lower Maintenance Costs
- Increased Operational Efficiency
