

CHEMFARM INTERNATIONAL

Pharmaceutical Solutions

Pharmaceutical Excipients

Functional excipient solutions developed to support formulation performance, manufacturing consistency and the physical characteristics of pharmaceutical dosage forms.

Pharmaceutical excipients are **non-active ingredients incorporated into pharmaceutical formulations alongside active pharmaceutical ingredients (APIs)**. Depending on their function, excipients can support manufacturing, stability, flow, binding, disintegration, coating, viscosity, appearance, taste and drug-delivery characteristics.

Chemfarm International can supply application-specific pharmaceutical excipients with emphasis on **consistent specifications, dependable sourcing and documentation appropriate to the supplied product and grade**.

Key Applications

Tablets • Capsules • Oral Liquids • Suspensions • Syrups • Topical Preparations • Pharmaceutical Coatings • Nutraceutical Formulations • Other Solid & Liquid Dosage Forms

Key Products & Types

Binders • Diluents & Fillers • Disintegrants • Lubricants & Glidants • Coating Excipients • Thickeners & Viscosity Modifiers • Stabilizers • Sweeteners • Pharmaceutical Colours • Preservative Systems • Application-Specific Excipients

Key Functional Areas

Binders - Support cohesion and tablet formation during manufacturing.

Diluents & Fillers - Provide required bulk and support formulation characteristics.

Disintegrants - Help tablets or capsules break down appropriately after administration.

Lubricants & Glidants - Support powder flow and efficient tablet/capsule manufacturing.

Coating Excipients - Used in suitable coating systems for appearance, handling and functional requirements.

Thickeners & Viscosity Modifiers - Help control rheology and consistency in liquid and semi-solid formulations.

Stabilizers - Support physical stability and consistency of suitable formulations.

Pharmaceutical Colours - Provide controlled and consistent coloration where permitted for the intended application.

Key Benefits

- Broad Functional Selection
- Consistent Product Specifications
- Solutions for Solid & Liquid Dosage Forms
- Application-Specific Excipient Options
- Reliable Sourcing & Supply
- Batch-to-Batch Consistency
- Technical Documentation Support

- Pharmaceutical-Grade Options Subject to Product Specification

Quality & Supply Commitment

Consistent Quality

Products supplied against defined specifications and applicable quality requirements.

Documentation Support

Relevant technical and quality documentation can be provided according to the specific product and supplied grade.

Application-Focused Portfolio

Excipient options covering different functional requirements across pharmaceutical and nutraceutical formulations.

Reliable Supply

Supporting customers through Chemfarm International's growing sourcing and distribution network.

Important Product-Grade Note

Pharmacopoeial, regulatory or certification claims such as IP, USP-NF, BP, Ph. Eur., GMP or other compliance statements should be shown only where they are supported for the **specific product, grade and supplier**.
