

CHEMFARM INTERNATIONAL

Textile Specialty Chemicals

Wetting Agents

Rapid wetting. Deep penetration. Consistent textile performance.

High-performance wetting solutions developed for rapid fabric penetration, uniform processing and improved textile preparation.

Wetting agents reduce surface tension and improve the penetration of water and processing chemicals into fibres and fabrics. They are essential in pretreatment, scouring, bleaching, dyeing and other wet-processing operations. Chemfarm International offers wetting agents focused on rapid wetting, good penetration, process compatibility and consistent performance.

Key Applications

Pretreatment • Scouring • Bleaching • Dyeing • Printing • Cotton Processing • Knitted & Woven Fabrics • General Textile Wet Processing

Key Products & Types

Low-Foam Wetting Agents • Non-Ionic Wetting Agents • Anionic Wetting Agents • Penetrating Agents • Scouring & Wetting Agents • Application-Specific Wetting Solutions

Key Benefits

- Rapid Wetting & Penetration
- Improved Chemical Distribution
- Uniform Fabric Processing
- Low-Foam Options
- Improved Process Efficiency
- Good Application Compatibility
- Consistent Processing Performance

Our Supply Commitment

Consistent Quality

Reliable quality and consistent performance across production requirements.

Application Expertise

Technical support for selecting suitable wetting solutions for different textile processes and operating conditions.

Reliable Supply

Supporting manufacturers through a growing Pan-India supply and distribution network.

Global Reach

Developing long-term relationships and supplying customers across international markets.
